

Systemtechnik

True Experts.

We are Europe's largest centre of competence for classic and digital railway technology and we are the engineering office of Deutsche Bahn.

We, DB Systemtechnik, are the leading rail sector provider for engineering and testing services, with more than 1100 employees in Germany, England and France, together with other partners around the world.

We use our know-how about the entire railway system to solve questions relating to vehicles, components, infrastructure, and their interfaces to meet the high expectations of our customers. Our experts develop technical and digital solutions for procurement, operation, and maintenance. In our laboratories and testing facilities, and with our own measurement vehicles, we carry out tests and simulations, from the smallest oil sample to approval runs for rail vehicles.

By combining digital competence with the knowledge of classic railway technology, we are well positioned for the future and offer our customers an all-round carefree package that they can rely on – whether in Germany, Europe or all over the world.

We guarantee independence, neutrality, professionalism and confidentiality. Our expertise will help you succeed.
