

Passenger Information Onboard Information

Real-time visual and audio travel updates.

Passengers receive relevant real-time travel information via onboard displays and announcements, fully aligned with the information channels of DB and its industry partners.

Key Features:

- **Passenger-relevant information** for the current journey and onward connections, including arrival and departure times, forecasts, platform information, occupancy data, and construction-related information, is provided in a timely and targeted manner.
- **A customer-centric, VDV 713-3-1-compliant industry design** ensures passenger information is intuitive, easy to understand, and instantly recognizable.
- **The solution's flexibility and modularity** meet the requirements of the rail industry and enable deployment in both existing and new train

Keeping passengers informed and oriented throughout their journey.
