

Passenger Information RI Platform

Consolidating and distributing information across rail transport.

The RI Platform consolidates travel-related information from a variety of sources and makes it available centrally for numerous applications and channels. As a central information hub, the RI Platform ensures that passengers receive consistent, up-to-date, and reliable information throughout their entire journey.

At a Glance:

- **Central data platform** consolidates operational, timetable, train formation, train positioning, and station information in one system.
- **Single source of truth** provides consistent, reliable data for journey-related information across public transport.
- **Powerful data processing capabilities** enable the analysis of information from approximately 40,000 local rail services and 550,000 public transport journeys every day.
- **Comprehensive information distribution** delivers up-to-date information to stations, onboard systems, digital services, and external partners through a wide range of interfaces.
