

Passenger Information

DB Communicator

Information and efficiency for staff.

The DB Communicator is a digital assistant that gives staff access to all the information they need in real time and significantly simplifies a wide range of operational railway processes.

Key Features:

- **Real-time information** on train operations, connections, train formations, delays, and operational messages.
- **Direct communication and collaboration** with colleagues on board, in operations control centres, and at stations.
- **Structured capture of operational information**, such as train formation changes, damage reports, and passenger counts, directly on site.
- **Digitalisation of key operational processes**, including digital train dispatching, the creation of train consist lists, and brake sheets.

Empowering **staff** while improving **passenger information** and **operational performance**, both on the current journey and across the nationwide rail network.
