

Infrastructure and Rolling Stock. Holistically conceived.

DB Systemtechnik is one of the leading providers of engineering and testing services in the railway sector, with more than 1,300 employees and an international partner network.

Our added value lies in our holistic understanding of the railway system.

We combine rolling stock expertise with infrastructure know-how and are familiar with the interfaces between vehicles, track, maintenance and operations.

Infrastructure in focus – rolling stock as a core competence

Vehicle-track interaction is one of our key areas of focus, as only the optimal interplay of all system elements enables safe, efficient, and economically viable railway operations.

Classic railway engineering meets digitalisation

We combine railway engineering expertise with digital solutions – reliable, efficient and international.

Our services:

- Planning, procurement, operation and maintenance
- Testing, simulations and test runs
- Laboratories, testing facilities and proprietary measurement vehicles
- From material testing to approval runs
